Mathematics - Sample Preview

This free four-page PDF demonstrates a StudyShelf preview.

It contains original introductory examples only.

The full store product is not configured for checkout.

1. Variables and Expressions

A variable represents a number that can change.

Example: x + 3 is an expression.

If x = 4, then x + 3 = 7.

You can combine like terms: 2x + 3x = 5x.

2. Solving Linear Equations

To solve x + 7 = 15:

Subtract 7 from both sides.

x = 15 - 7

Therefore x = 8.

Check: 8 + 7 = 15.

3. Practice Questions

Try these questions:

1. Evaluate x + 5 when x = 3.

2. Simplify 4y + 2y.

3. Solve x + 9 = 20.

4. Solve 2x = 14.

5. Solve x - 6 = 8.
